TR31 Manufactures and Requirements

Manufacturer	Pin Pad	Software	Requirments
Hyosung	8000R or X1	V06.03.00 or above	Under Key Management, You will need to change the Key Mode from TDES to TDES TR31
Genmega/Hantel/Tranax	B3 or B5	V05.00.45 and above	Once the correct software is loaded, it is required to update the pin pad firmware. This is done by going to System Setup >Device Setup >Keypad. If you have a B5 keypad, it will update automatically when you press the button. If you have a B3 keypad, you need to jump the pins between the two connectors. Once the EPP firmware is updated in the main OP menu - top left corner will say TR31: Supported
Triton	T10	4.2.5C or above (Contact Manufacture for correct software based on the main board.	The correct software and patch file (if needed) needs to be loaded for TR31 to work. (No other changes are required)
